

The Role:

We are seeking a highly skilled and motivated **AI Engineer** with a strong specialization in **Computer Vision**. In this role, you will be instrumental in designing, developing, and deploying state-of-the-art AI models for real-world applications. You will work on the entire model lifecycle — from data collection and preprocessing to training, optimization, and deployment.

Key Responsibilities:

- **End-to-End Model Development:**
Lead the design, development, and implementation of robust computer vision models for tasks such as image classification, object detection, segmentation, and activity recognition.
 - **Data Pipeline Management:**
Build and manage large-scale image datasets for training and evaluation, including data collection, labelling, augmentation, and cleaning.
 - **Model Training & Tuning:**
Train deep-learning models (CNNs, Vision Transformers, etc.) either from scratch or using transfer learning. Expertly perform hyperparameter tuning, utilize parameter-efficient methods (e.g., PEFT, LoRA), and leverage distributed training techniques with GPU/CUDA to optimize performance.
 - **Deployment & Integration:**
Convert and optimize models for deployment in production environments. **Containerization (Docker, etc.) and familiarity with Linux environments are required.** Experience deploying models to **edge or embedded systems** is highly desirable.
 - **Research & Innovation:**
Stay current with the latest academic research and industry trends in computer vision and AI — including **fine-tuning via Hugging Face Transformers**, large-image-dataset strategies, **vision-language models (VLMs)**, **open-vocabulary object detection**, **multimodal architectures**, and emerging integrations between **LLMs and computer vision**.
 - **Collaboration:**
Work closely with cross-functional teams — including software developers, data scientists, and product managers — to define requirements and deliver high-impact AI features.
-

Required Qualifications & Skills:

- **Education:**

Bachelor's degree in Computer Science, AI, Machine Learning, or a related field is required. A Master's degree is a strong plus.

- **Experience:**

2+ years of hands-on experience in developing and deploying machine learning models, with a strong focus on computer vision.

- **Technical Proficiency:**

- **Computer Vision:** Deep practical experience with OpenCV, PIL, and deep-learning frameworks for vision tasks.
- **Framework: PyTorch is a must.**
- **Model Techniques:** Proven familiarity with transfer learning, fine-tuning vision models, and parameter-efficient fine-tuning techniques (PEFT, LoRA, adapters, etc.).
- **Architectures:** Experience working with backbone models such as **ResNet, VGG, EfficientNet, Vision Transformers (ViT)**, and modern detection frameworks including **YOLO (v5–v11), DETR, GroundingDINO**, or similar CNN and Transformer-based architectures.
- **Data & Training:** Comfortable working with large-scale image datasets, data augmentation, preprocessing, managing the full training pipeline, and working with GPU/CUDA acceleration and distributed training for optimized inference.
- **Deployment / Edge:** Familiarity with **Linux environments** is required. Experience with **containerization (Docker, etc.)** and deploying models to **edge devices or embedded hardware** is a plus.
- **Emerging Technologies:** Familiarity with **vision-language models (VLMs), multimodal approaches**, and **open-vocabulary detection** techniques is highly desirable.

Portfolio:

Candidates **must share their portfolio**, showcasing prior work in computer vision (model design, training, and deployment). Please include **GitHub repositories, links**, or detailed descriptions of relevant projects demonstrating your technical capabilities.

Bonus Skills:

- Experience with **MLOps tools** such as MLflow, Kubeflow, or Weights & Biases
- **Container orchestration** (Kubernetes)
- Familiarity with **vision-language models** and **multimodal architectures**
- Experience with **model quantization, pruning, and optimization** for edge devices
